

Threat intelligence services that identify cyberthreats before they attack your online IT assets, remote workers, and networks.

New valid notifications every **3** days for each campaign

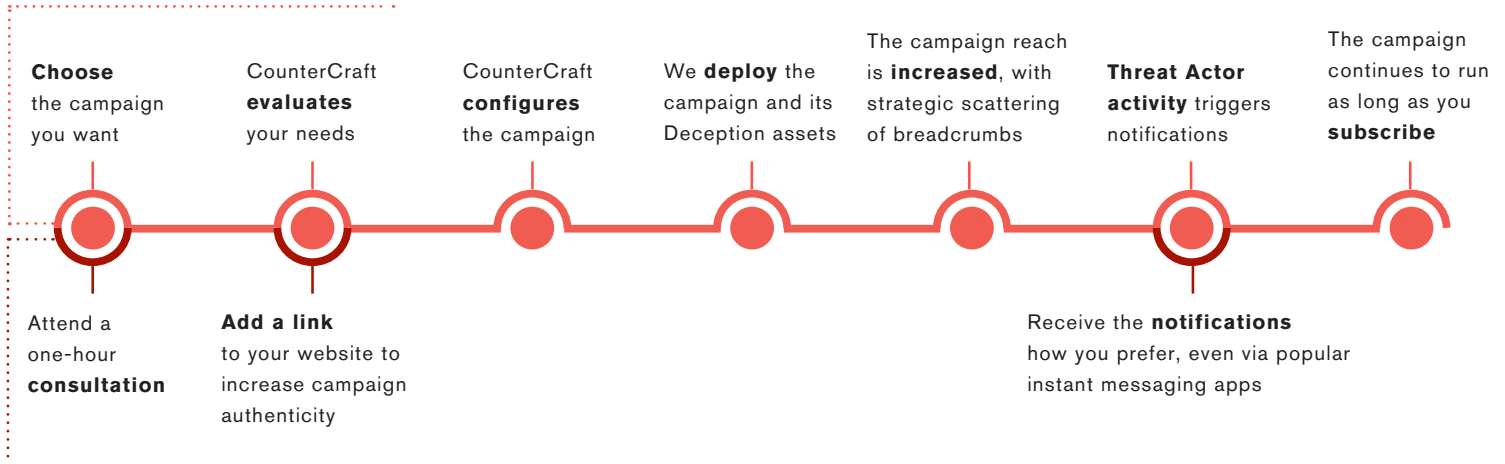

**4** different Cloud campaigns to choose from

**10** TTPs per campaign identified on average / month

Average client/partner contracts at least **3** campaigns

**260x** reduction in noise per campaign

## Steps to Deployment

## Actions Required from Your Team

### Why It's Amazing

No additional resources needed

Quick to deploy

Useful threat intel specific to your organization

Real time notifications

Protect cloud assets

---

# What is CounterCraft Cloud™?

CounterCraft Cloud is a threat intelligence service that uses our award-winning deception technology to provide cyber threat intelligence for your online IT assets, identifying attackers before they attack you.

It is a cloud-based managed cybersecurity service that is fast and easy to implement with no additional resources needed. Protect your network by deflecting attackers into a buffer zone to detect attacks early and deliver actionable threat intelligence to your team so you can run incident response playbooks immediately.

## How does it work?

We create threat intelligence campaigns using deception techniques. We deploy attack vector discovery assets, or breadcrumbs, to identify cyberthreats scouting your online IT assets from the outside. We analyze all surfaced threats and collect intelligence on the threat, the threat actor capabilities, and their intended target. Unlike generic threat intelligence feeds, CounterCraft alerts include information about attackers' tactics, techniques, and procedures (TTPs) cross-referenced with the MITRE ATT&CK framework, as well as Indicators of Compromise (IOCs). You can easily feed this data into your incident response, SIEM, ticketing and other systems for taking action.

Once you choose your campaign, CounterCraft implements and manages the service. You don't have to dedicate resources to purchase, deploy, or configure infrastructure. You just pay a monthly subscription fee.

### Plug and Play:

CounterCraft implements and manages the service. There is no need to dedicate resources to purchase, deploy, or configure infrastructure. Service terms are flexible with a monthly subscription that can be cancelled at any time.

### Tailored Campaigns:

CounterCraft deploys the campaign tailored to your specific organization, so you receive IOCs and TTP alerts targeted directly at your organization. Threat intel notifications directly reflect the threats attacking your online IT assets.

### Rapid Deployment:

Choose an intelligence-led cyber deception campaign and receive actionable information within hours.

### In-depth Actionable Data:

Our advanced monitoring dashboard enhances security, discovery, analysis and risk governance data while uncovering previously unidentified malicious actors and cyber threats.

# In the Real World

**Client Sector:** Retail

**Problem:** Suspected insider threat activity

**Cloud Campaign Installed:** Pre-Breach Activity

**Outcome:** The campaign uncovered valid internal customer credentials in the wild. The customer was not aware of that. The threat actor attempted to use them in a deception environment built to mimic customer infrastructure, where they also revealed knowledge of internal IT organization and resource names. The threat intel was provided in real time to the customer, who started incident response procedures to address the security risk.

## Our Cloud™ Campaigns

We've designed sophisticated deception campaigns to address the most common problems today.

### Remote Workers & VPN Risk

Add a layer of assurance to your remote workers by deploying a vulnerable VPN service and associated breadcrumbs to detect threat actors searching for entry.

### Spear Phishing Attack Vector

Stop Spear phishing attacks from penetrating your organization.

### Ransomware Detection & Mitigation

Mitigate the threat of targeted ransomware attacks in its early stages.

### Pre-breach Detection

Provides early detection of attackers conducting technical reconnaissance of vulnerable external facing IT and cloud services associated with your online IT assets.

# Benefits of Cloud

## No Additional Resources Needed

Our service requires no skilled staff or other internal resources from your team. CounterCraft Cloud automatically increases your team's productivity.

## Active Defense Made Easy

CounterCraft Cloud feeds can be connected with SIEM, TIP, SOAR, EDR, UEBA, and other tools for active defense. Use the data to block IP addresses, revoke credentials, harden firewalls, and take other measures to boost protections where needed. CounterCraft campaign data also can be integrated with orchestration solutions to automate response playbooks.

## Improve Overall Security Effectiveness

CounterCraft provides high-impact intelligence, enriched by attackers' TTPs, IOCs, and threat actor characteristics. You receive contextualized profiles of external adversaries trying to compromise your remote working infrastructure or workers. You gain a time advantage, because deceptive assets delay attackers as they try to identify vulnerabilities for exploitation.

## Cover the New Attack Surface Cost Effectively

For a simple monthly subscription, you can significantly improve reconnaissance and proactive defense of a much larger internet-facing and cloud-based attack surface. At the same time, you gain enriched data that enhances capabilities of your existing systems.

## Strengthen Your Strategy

Threat intelligence based on deception delivers actionable information for aligning corporate security strategy with available resources to build a stronger security posture. Information from CounterCraft Cloud provides threat intelligence breadth and depth for communicating the value of threat intelligence teams to key management and board members.

## Get Started

Choose one or more of our campaigns to get simultaneous, comprehensive external threat detection across your online IT assets' attack surface. Purchase multiple campaigns and enjoy a discount.

The process is simple:

- 1 Access the full service description and commercial offer by completing the form on the website.
- 2 Resolve any doubts with the sales team and return the signed commercial offer.
- 3 Enjoy the service! Attend the onboarding tutorial, meet your account manager and hold regular meetings with your client satisfaction team.

## About CounterCraft

CounterCraft is the next generation of threat intelligence. The CounterCraft Cyber Deception Platform offers active defense powered by high-interaction deception technology. CounterCraft detects threats early, collects personalized, actionable intelligence, and enables organizations to defend their valuable data in real time.

Their award-winning solution, fully integrated with MITRE ATT&CK®, fits seamlessly into existing security strategies and uses powerful automation features to reduce operator workload. Founded in 2015, CounterCraft is present in New York, London, and Madrid, with R&D in San Sebastian, Spain. Learn more at [www.countercraftsec.com](http://www.countercraftsec.com).
